Special Effect

Movement timing de-adjust for ARRIFFLEX 435 ES

Necessary is the installation of the special software “**GECKO-PHS**” into the ARRIFFLEX 435 ES

Connect a RU-1 with the modified ARRIFFLEX 435 ES

The function **SCU must be switched off**; otherwise, the change in direction of the movement timing will not operate.

Following switch on VSU Speed indicator in the camera display starts flashing

By turning the VSU wheel you change the timing between movement and shutter

3 fps corresponds to 0° phase shift

50 fps corresponds to 170° phase shift

The variation range runs linear

In position “Automatic” you change the direction of the timing

To avoid motor noise, the changing of direction is allowed in position 0° only

It is not permitted to copy this software!

It is not allowed to leave them into a camera for normal operation, because neither film test nor other tests are execute!

Usually in normal operation, there should be no problems, but this can not guaranteed!
